48% of all women drinkers drank alcohol at a level that puts them at risk of an alcohol-related disease or injury over their lifetime
30% of all women surveyed were tobacco smokers. This is substantially higher than women in the general community, which is 13%.*

Of women had accessed psychological services in their lifetime.

65% had received a mental health diagnosis in their lifetime.

47% of women reported high psychological distress (22% of 16 to 24 year olds).

76% of women with a regular doctor or health centre were out about their sexuality.

81% of women were very/satisfied with their regular GP/practice.

Smoking was more common in 16 to 24 year olds.

42% Smoking was more common in 16 to 24 year olds.

45% had used one or more illicit drugs.

Cannabis (29%)
Ecstasy (19%)
Cocaine (16%)

Rates of drug use were much higher than in the general community.
The SWASH survey is the only one of its kind in the world. This research informs ACON’s lesbian and same-sex attracted women’s health work, helps us to create better services and advocate for recognition of the health needs of our community in NSW and Australia. This is only a snapshot of the survey findings.
